

CERTIFICATION OF NEUTRALIZATION AND CLEANLINESS

For the protection of Teledyne Monitor Labs' employees, and in accordance with EPA Regulations OCFR260, 261 and OSHA Standards of 29CFR 1910, Safety Data Sheets (SDS) are required for any instruments that you are shipping to us that have been installed, or have had surfaces in contact with media that may be harmful to people.

This certificate is your confirmation that the required information is being made available and that effective cleaning and neutralization of any such media has been accomplished prior to your shipment to us.

We will furnish the Return Material Authorization (RMA#) after the certificate has been returned to Teledyne Monitor Labs. **Should we receive a shipment with instrumentation that appears to have been exposed to media of unknown nature, no further action will be taken with such equipment until we acquire the necessary information. If the material has not been cleaned of obvious dirt, dust, or debris, the material will be returned for cleaning at customer's expense.** This can delay our shipment back to you. Should the necessary information not be received within a reasonable time, the return of equipment to its sender without further processing will occur.

We must know what process flows through the unit (water, steam, gas, etc.). We cannot begin evaluation / repair on this unit until this form is complete. Please send SDS sheet if needed. **The unit(s) will be put on hold if this form is not complete when received.**

Substance in Contact with Instrument(s): _____

A SDS for this media is accompanying this certificate (not required for air, potable water or steam)

I attest that the following item(s) being shipped will be appropriately cleaned and neutralized prior to shipment. Customer Representative: _____ Date: _____

Phone number if different than person requesting RMA: _____

Item(s) Description _____

_____ Serial Number(s) _____

Person Requesting RA # _____

Company Name: _____

Telephone: _____ Email: _____

Reason for Return: _____

Email the completed certificate along with any Material Safety Data Sheet to:
